### Additional Info

Concept... Nascar meets cafe racer, modified H-D gas tank in house at SS&C, including twin race fillers. Frame has been totally cleaned and fender rails chopped. Rear fender handmade at SS&C, exhausts handmade at the Speed Shop, front airbox manufactured to house the battery, the oil tank and electrics. A race style console on the left of the airbox houses fuel and ignition switches and push button start up. Performance Machine master cylinders and switch gear wrap around the Cafe Racer style clip ons. The brakes, twin at front and huge single at rear, help to stop the beast. Covingtons Rocker covers and RSD timer covers are fitted to the anodised engine, a huge ram air pipe sits proud.
